

SimpleFix Seismic Restraint Kit

BRANZ Appraisal No. 761 (2023)

The SimpleFix Seismic Restraint Kit has been approved by a registered engineer for water heaters up to 700 litres in accordance with the seismic design code NZS 1170.5:2004. Recent updates to G12 Water Supplies Acceptable Standards indicate:

- An additional centre strap is required where a storage water heater is located more than 12m off the ground.
- Additional timber framing may be required in retrofit situations to ensure adequate strap fixing is available.
- Straps shall not be installed where they clash with the water heater inlet, outlet or controls.
- Where the 100mm maximum strap clearance from the top or bottom of the storage water heater cannot be achieved, straps may be placed within the top and bottom 25% and one or two additional straps may be required. 1 additional strap placed centrally for cylinders up to 200L & 2 additional straps evenly spaced for cylinders 200-360L.
- A maximum total of four straps are required when complying with both Note 1 and Note 4.

FOR CYLINDERS UP TO	
200L Capacity	Up to 3 x Straps
200L to 360L Capacity	Up to 4 x Straps
360L to 500L Capacity	4x Straps
500L x 600L Capacity	5x Straps
600L to 700L Capacity	6x Straps
